Partnership Proposal

Indoor Navigation & Visitor Engagement for Your Exhibition

PILOT PARTNERSHIP · FIRST EXHIBITION FREE OF COST

Mapster is an indoor wayfinding and visitor-engagement platform built for large venues — exhibitions, expos, and trade shows — where finding the right stall, hall, or facility is often the single biggest visitor frustration.

PREPARED FOR	International Mining, Equipment & Minerals Exhibition (IME)
PREPARED BY	Team Mapster · mapster.co.in

Who We Are

Mapster is an indoor navigation and exhibition-engagement platform: a single, installable web app that guides visitors turn-by-turn to any stall, hall, or facility, while giving organizers real visibility into how their venue is actually being explored.

We built Mapster to solve a problem every large exhibition faces: visitors spend more time searching for stalls than actually engaging with them, exhibitors in less obvious corners of the venue get overlooked, and organizers have no real data on visitor movement to show sponsors or plan the next event around.

Turn-by-turn	Gamified	Live
indoor wayfinding to every stall & hall	treasure-hunt engagement drives footfall to every booth	admin dashboard for visitor & booth analytics

Ready today, not a concept

Mapster is a fully built, working platform already — not a pitch for something we still need to create. We're ready to bring it to your exhibition right away.

What Exhibitions Struggle With Today

Visitors get lost

Large venues with dozens or hundreds of stalls overwhelm visitors with no digital way to search for a name, category, or hall and get guided there directly.

Low booth engagement

Exhibitors away from the main entrance or a busy walkway are simply never found by a large share of visitors — hurting exhibitor ROI and your renewal conversations with them next year.

No visitor insight

Organizers rarely have real data on which halls, stalls, or categories visitors actually explored — data that matters enormously to sponsors and to planning your next event.

One-way information flow

Printed maps and static signage can't be updated live for a schedule change, a moved stall, or a time-sensitive announcement during the event itself.

What Mapster Brings to Your Venue

One installable web app — no app-store download required — covering the whole visitor journey, and a dashboard giving you the visibility to run the event with confidence.

Real-Time Indoor Navigation

Turn-by-turn walking directions to any stall, hall, washroom, or facility — accurate indoors where GPS alone fails.

Searchable Exhibition Map

A live, categorized directory of every exhibitor/stall — visitors search by name or category and get routed instantly.

Treasure Hunt & Gamification

Points, streaks, and a leaderboard reward visitors for actually visiting stalls — turning footfall into a game that benefits every exhibitor, not just the ones near the entrance.

Announcements & Guidebook

Push notifications and an in-app guidebook keep visitors current on schedule changes, offers, and event info in real time.

Multi-Language Support

The app already speaks 7 Indian languages, so language is never a barrier to visitors finding their way.

Admin Dashboard & Analytics

Your team gets a live view of visitor activity, stall verifications, and engagement — real data you can bring back to sponsors and exhibitors.

Why We're Reaching Out Now

Your First Exhibition, Completely Free

Mapster is looking for its very first pilot exhibition partner. Because this is our pilot, we will build, deploy, and support the complete Mapster experience for your upcoming exhibition entirely free of cost — no license fee, no setup fee, no cost to your team.

In return, we simply ask for the opportunity to prove real value at your event and to use it as our flagship case study.

And after the pilot?

Once your exhibition is live and you've seen Mapster in action, any further changes, customizations, or new features you'd like for your event or future editions will be taken up exactly as per your requirements — we grow the platform around what you actually need, not the other way around.

There is no long-term commitment attached to this pilot — the goal is simply to show you, with your own event and your own visitors, what Mapster can do.

A Simple, Low-Effort Rollout

We handle the technical work end to end — here's what the process looks like from your side.

1. **Kickoff Call**
   A short call to understand your venue, halls, and exhibitor list.

2. **Digital Map Setup**
   We build the indoor map and load your exhibitor/stall data — no work needed from your team.

3. **Walkthrough & Testing**
   We test the live app with your team on-site or over a call before it goes to visitors.

4. **Go-Live**
   QR codes and signage at entry points get visitors straight into the app — nothing to install from an app store.

5. **Live Support**
   Our team stays reachable through the exhibition itself.

6. **Post-Event Report**
   A summary of visitor activity and engagement data from your event.

What We'll Need From Your Team

- Your venue's floor plan / hall layout
- A list of exhibitors with their stall/booth numbers
- Your event branding assets (logo, colors) for a co-branded experience
- One point of contact from your team for coordination

Let's Talk

We'd love to walk you through a live demo and finalize the details for your upcoming exhibition — completely free, with nothing to lose.
